

# PHASE 4

## Creating a Record Producer – Raise Employee Issue

*ServiceNow Employee Raise Issue Application*

### 1. Introduction

In Phase 4 of the ServiceNow Employee Raise Issue project, a Record Producer is created to allow employees to raise an issue through the Service Catalog. The Record Producer provides a user-friendly form where employees can enter issue-related information. When the form is submitted, the entered information is mapped to the corresponding fields of the Employee Raise Issue table and a new record is created automatically.

The screenshot displays the ServiceNow Skill Wallet interface. On the left is a blue sidebar with navigation links: Dashboard, Skill Bank, Skill Wallet (selected), Skill Card, and Skill Credits. The main content area is titled 'Employee Raise Issue – Record Producer & Service Portal ...'. It shows a task 'Creating a Record Producer' assigned to 'Yalamarti Keerthi Nandana' with a duration of 40m. The task description includes steps for navigating to the Service Catalog, creating a new Record Producer, and configuring it. On the right, a 'Project Progress' section lists eight phases, with 'Creating a Record Producer' (Phase 4) highlighted.

**Creating a Record Producer**

Story Duration: 40m

Assigned to Yalamarti Keerthi Nandana

**Description**

**Steps:**

- Navigate to All menus – Service catalog – catalog definition – Record producer.
- Click the New button on the top right corner to create a new.
- Name : Raise Employee Issue.
- Table : Employee Raise issue.
- What it will contain : Give some description.
- In the Accessibility Section.
- Catalog : service catalog.(choose)
- Category : Service.(choose).
- Add Image in the Picture field.
- Give Meta name as Table name.
- Then Save the Form.
- Then Under related links Click the Variable section Click new to create Fields.
- Then Choose type Based on the Employee raise issue table.
- Enable Map to Field option.
- Choose the Field and type also.
- And give orders from 100,200,300,.. For each variable change it.
- Now in the Question Section Click fill the Question and name populates auto.
- I like that: Create 5 variables and save

PHASE : 5 Creating a new Service portal 0% ✓

PHASE 6: Creating Widgets and Adding to the Page 0% ✓

PHASE : 7 Testing and validation. 0% ✓

PHASE : 8 Conclusion 0% ✓

### 2. Objective

- To create a Record Producer named Raise Employee Issue.
- To connect the Record Producer with the Employee Raise Issue table.
- To configure the Record Producer under the Service Catalog.
- To create variables for collecting employee issue information.
- To map variables to the corresponding fields in the Employee Raise Issue table.
- To make the Record Producer available through the Service Portal.

- To test the form and verify that a new Employee Raise Issue record is created.

### 3. Creating the Record Producer

A Record Producer is created to provide an easy way for employees to submit an issue from the Service Catalog.

1. Navigate to All → Service Catalog → Catalog Definition → Record Producers.
2. Click the New button.
3. Enter the Record Producer name as Raise Employee Issue.
4. Select Employee Raise Issue as the target table.
5. Enter a suitable description for the Record Producer.
6. Select the Service Catalog and appropriate Category.
7. Save the Record Producer.

Activate Deactivate

1 to 20 of 31

The screenshot shows the ServiceNow interface for configuring a Record Producer. The top navigation bar includes 'All', 'Favorites', 'History', and 'Workspaces'. The current record is titled 'Record Producer - Raise Employee Issue'. A warning message states: 'This record is in the Employee Center application, but Employee center is the current application. To edit this record click here. [SN Utils] Switch to Employee Center application click here'. A blue banner at the top of the form area says: 'Build and modify items faster with the improved Catalog Builder.' The form fields are as follows:

|             |                                                           |             |                                     |
|-------------|-----------------------------------------------------------|-------------|-------------------------------------|
| Name        | Raise Employee Issue                                      | Application | Employee Center                     |
| Table name  | Employee raises issue<br>[sn_ex_sp_employee_raises_issue] | Active      | <input checked="" type="checkbox"/> |
| State       | -- None --                                                |             |                                     |
| Checked out | -- None --                                                |             |                                     |
| Owner       | System Administrator                                      |             |                                     |

Below the form fields are tabs for 'What it will contain', 'Accessibility', 'Generated Record Data', and 'Portal Settings'. The 'What it will contain' tab is active, showing a text area for 'Add a short description and a full description' and a 'Short description' field.

## 4. Record Producer Configuration

| Property     | Configuration           |
|--------------|-------------------------|
| Name         | Raise Employee Issue    |
| Target Table | Employee Raise Issue    |
| Catalog      | Service Catalog         |
| Purpose      | Raise an employee issue |
| Variables    | 5                       |

## 5. Creating Variables

After creating the Record Producer, variables are added to collect the information required for creating an Employee Raise Issue record. The variables are configured through the Variables related list of the Record Producer.

8. Open the Raise Employee Issue Record Producer.
9. Navigate to the Variables related list.
10. Click New.
11. Select the appropriate variable type.
12. Enter the variable question.
13. Enable Map to Field and select the corresponding Employee Raise Issue field.
14. Set the order of the variable.
15. Save the variable.

Variable - what is the Requester name

## 12. Mapping Variables to Table Fields

The Map to Field option is used to transfer the information entered by the employee into the corresponding fields of the Employee Raise Issue table.

| Record Producer Variable   | Employee Raise Issue Field |
|----------------------------|----------------------------|
| What is the Requester name | Requester                  |
| Which Category             | Category                   |
| What is Subcategory        | Subcategory                |
| Which State is this issue  | State                      |
| Short Description          | Short description          |

The screenshot shows the ServiceNow interface for configuring a variable named 'Which Category'. The top navigation bar includes 'All', 'Favorites', 'History', 'Workspaces', and 'Admin'. The variable is currently set to 'Employee Center' with an application scope of 'Employee center' and a default update set. A warning message states: 'This record is in the Employee Center application, but Employee center is the current application. To edit this record click here. [SN Utils] Switch to Employee Center application click here'. The configuration details are as follows:

- Application:** Employee Center
- Map to field:** ☒
- Type:** Select Box
- Catalog item:** Raise Employee Issue
- Order:** 200
- Field:** u\_category
- Record producer table:** sn\_ex\_sp\_employee\_raises\_issue
- Active:** ☒
- Mandatory:** ☐
- Read only:** ☐
- Hidden:** ☐
- Disable automatic slot fill based on user context:** ☐

Below the configuration details, there are tabs for 'Question', 'Annotation', 'Type Specifications', 'Default Value', 'Auto-populate', 'Permission', and 'Availability'. The 'Question' tab is selected, showing a text area with the instruction: 'Specify the Question that explains the options available to the end user when ordering the item'. Below this, the following fields are visible:

- Question:** Which Category
- Name:** u\_category
- Conversational label:** (empty)
- Tooltip:** (empty)

A 'Copy' button is located at the bottom left of the configuration area.

## 13. Accessing the Record Producer through Service Portal

After configuring the Record Producer, it can be accessed through the ServiceNow Service Portal. The employee can select Raise Employee Issue from the available catalog items and open the issue form.

## 14. Record Producer Form

When Raise Employee Issue is opened, the user is presented with the configured fields. The form contains Requester Name, Category, Subcategory, State and Short Description.

## 15. Submitting the Issue

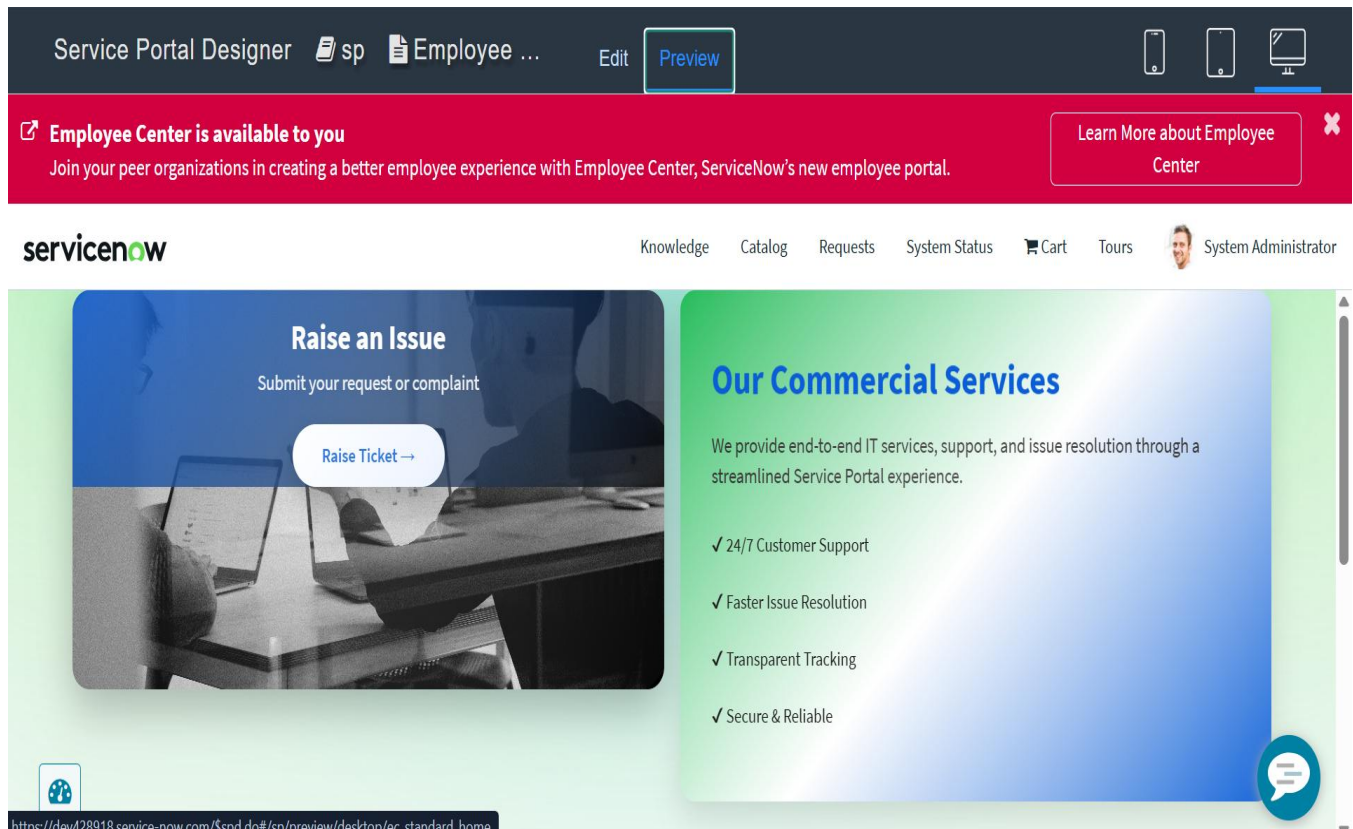

After entering the required information, the employee clicks Submit. The Record Producer processes the submitted information and creates a new record in the Employee Raise Issue table.

## 16. Record Creation

After submission, the entered information is mapped to the Employee Raise Issue table. The resulting record contains the Requester, Category, Subcategory, State and Short Description values.

## 17. Testing and Validation

| Test Case                        | Expected Result               | Validation |
|----------------------------------|-------------------------------|------------|
| Open Raise Employee Issue        | Form opens successfully       | Pass       |
| Select Requester                 | User can be selected          | Pass       |
| Select Category                  | Category value is accepted    | Pass       |
| Select Subcategory               | Subcategory value is accepted | Pass       |
| Select State                     | State value is accepted       | Pass       |
| Enter Short Description          | Description is accepted       | Pass       |
| Click Submit                     | Issue is submitted            | Pass       |
| Check Employee Raise Issue table | New record is created         | Pass       |

## 18. Result

The Raise Employee Issue Record Producer was successfully configured. Employees can now open the Service Catalog, select Raise Employee Issue, enter the required issue information, submit the form and automatically create an Employee Raise Issue record.

## 19. Technologies / ServiceNow Features Used

- ServiceNow
- Service Catalog
- Record Producer
- Custom Table
- Variables
- Reference Variable
- Choice Variables
- Single Line Text Variable
- Map to Field
- Service Portal
- Catalog configuration

## 20. Business Benefits

- Provides a simple interface for employees to submit issues.
- Collects structured issue information.
- Reduces manual record creation.
- Automatically maps submitted information to the target table.
- Makes issue submission accessible through the Service Portal.
- Improves consistency of employee issue records.

## 22. Conclusion

Phase 4 implements the Record Producer functionality for the Employee Raise Issue application. The Record Producer provides a structured Service Catalog form through which employees can submit issues. The configured variables and field mapping ensure that the submitted information is stored in the appropriate fields of the Employee Raise Issue table.
