

PHASE 5

Creating a New Service Portal & Employee Center Portal Page

Project: Employee Raise Issue – Record Producer & Service Portal

1. Introduction

Phase 5 focuses on extending the ServiceNow Employee Raise Issue application by creating a dedicated Service Portal and preparing a custom Employee Center Portal Page. The portal provides a user-facing entry point for employees to access services, while the page provides a dedicated page structure that can be customized in later phases.

2. Objective

- Create a new Service Portal named “Requesting portal”.
- Configure the portal URL suffix as “employee_request”.
- Use the Employee Center standard homepage and knowledge homepage.
- Configure the login page, main menu, 404 page, logo, and theme.
- Create a new Employee Center Portal Page titled “Employee Center Portal Page”.
- Set the page ID to “employee_center_portal_page”.
- Save the portal and page so they can be used for later customization.

3. Phase 5 Requirements

Configuration	Required Value
Portal title	Requesting portal
URL suffix	employee_request
Homepage	ec_standard_home
KB home page	esc_knowledge_home
Login page	login
Main menu	Employee Center Menu
404 page	404
Theme	Employee Center Coral Theme
Portal page title	Employee Center Portal Page
Portal page ID	employee_center_portal_page

4. Creating a New Service Portal

4.1 Navigate to Service Portal Configuration

Open the ServiceNow Developer Instance. From the All menu, search for “Service Portal” and open the Service Portal configuration/module. From the Service Portal administration area, use the New option to create a new portal.

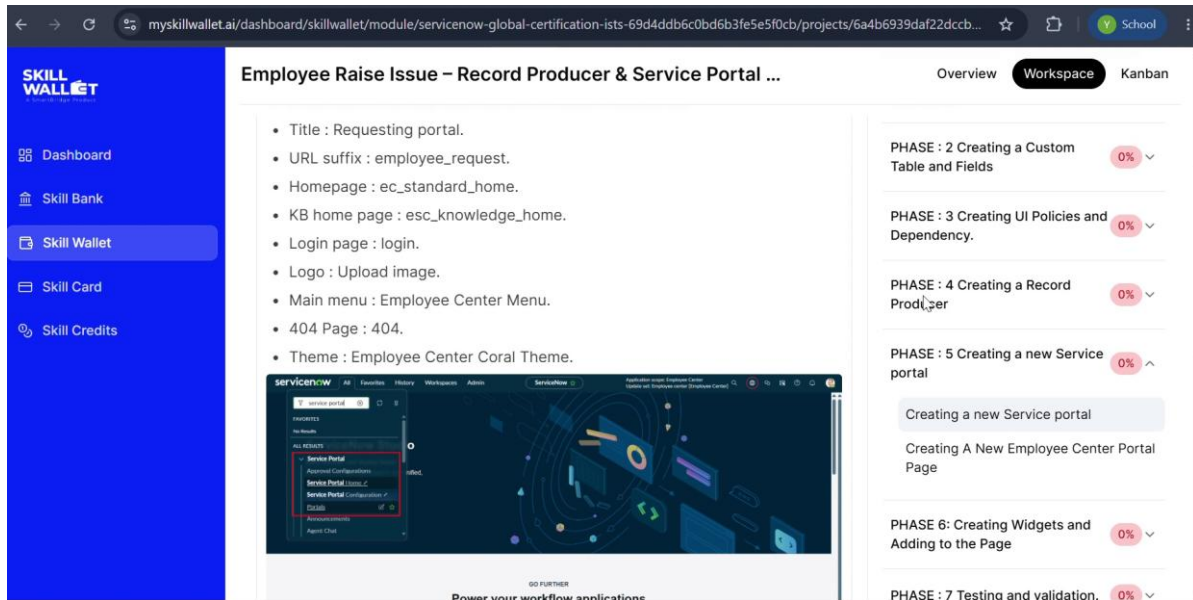

Figure 1: Service Portal navigation and configuration guidance shown in the project instructions.

4.2 Configure the New Portal

Create the portal using the following values:

- Title: Requesting portal
- URL suffix: employee_request
- Homepage: ec_standard_home
- KB home page: esc_knowledge_home
- Login page: login
- Main menu: Employee Center Menu
- 404 page: 404
- Theme: Employee Center Coral Theme

Upload/select the required logo image if available. Verify the application and other portal fields before saving.

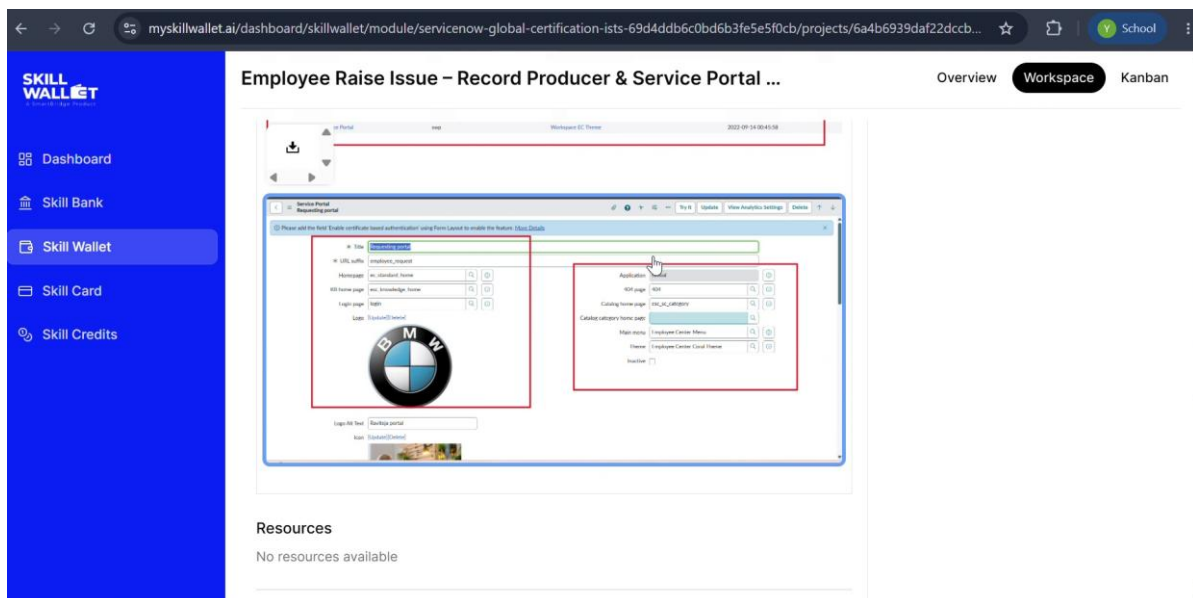

Figure 2: Example Service Portal configuration showing the Requesting portal fields and portal settings.

4.3 Save and Verify the Portal

After entering the required configuration, save/update the portal record. Verify that the portal is listed under Service Portal and that the URL suffix is employee_request. The portal can later be opened through its portal URL for end-user testing.

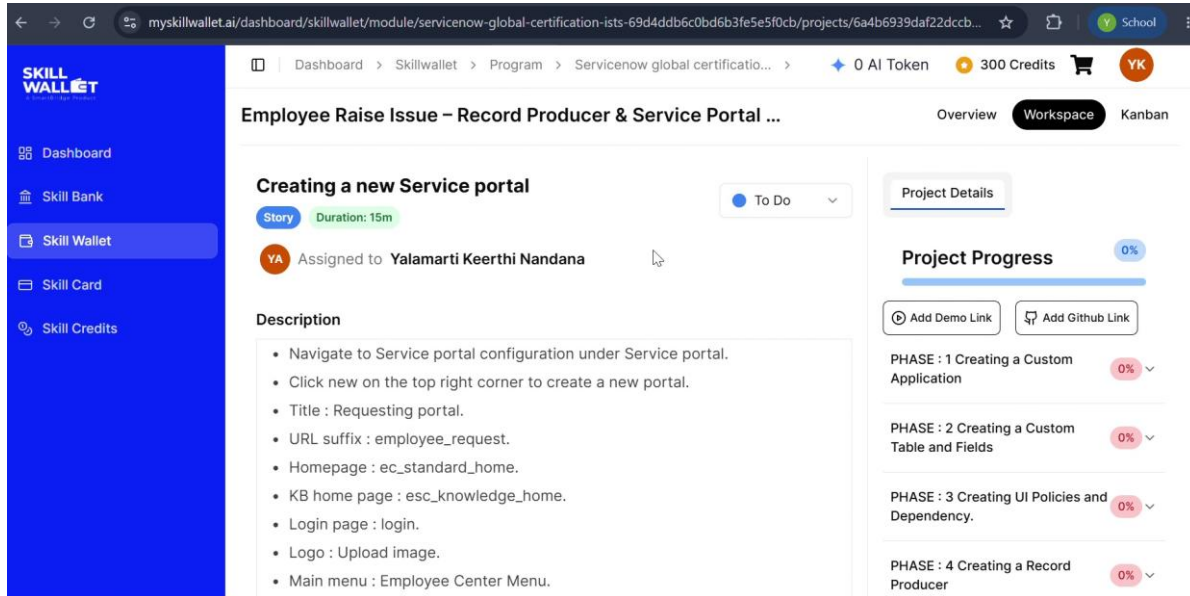

Figure 3: Phase 5 project instructions for creating the new Service Portal.

5. Creating a New Employee Center Portal Page

The second activity in Phase 5 creates a dedicated page that can be used as a custom Employee Center page. The project instructions specify the page title and ID.

5.1 Open the Pages Module

1. Open the All menu in the ServiceNow instance.
2. Search for “Service Portal”.
3. Select the Pages module.
4. Click New to create a new page.

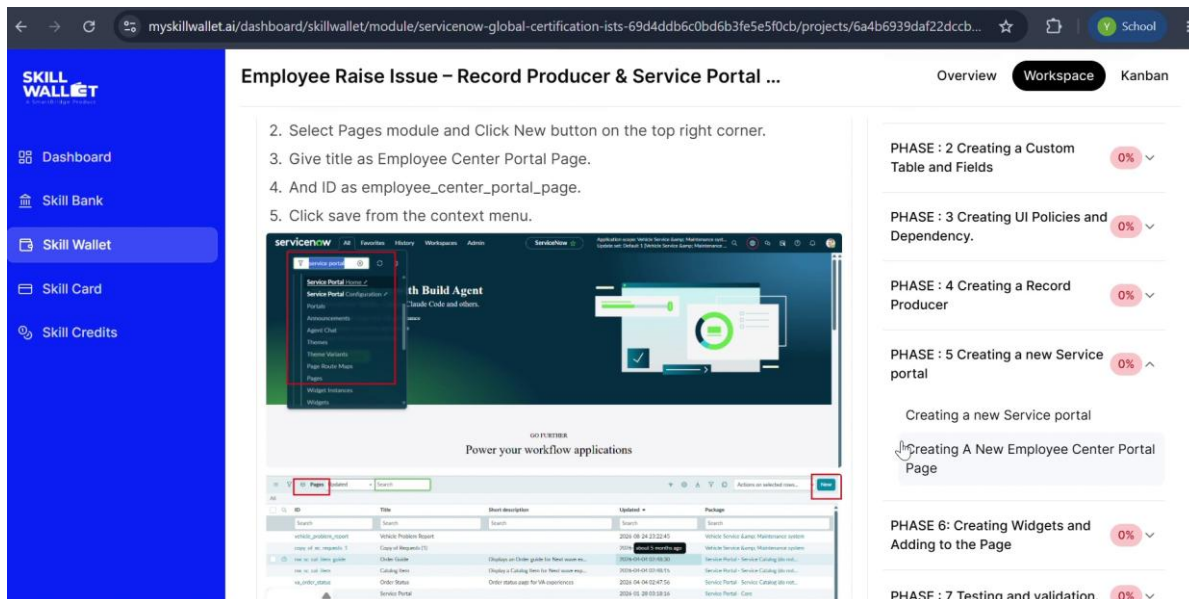

Figure 4: Pages module and New button navigation shown in the Phase 5 instructions.

5.2 Enter Page Details

- Title: Employee Center Portal Page
- ID: employee_center_portal_page

Enter the title and ID exactly as specified. Leave other fields at their required/default values unless the project instructions require additional configuration.

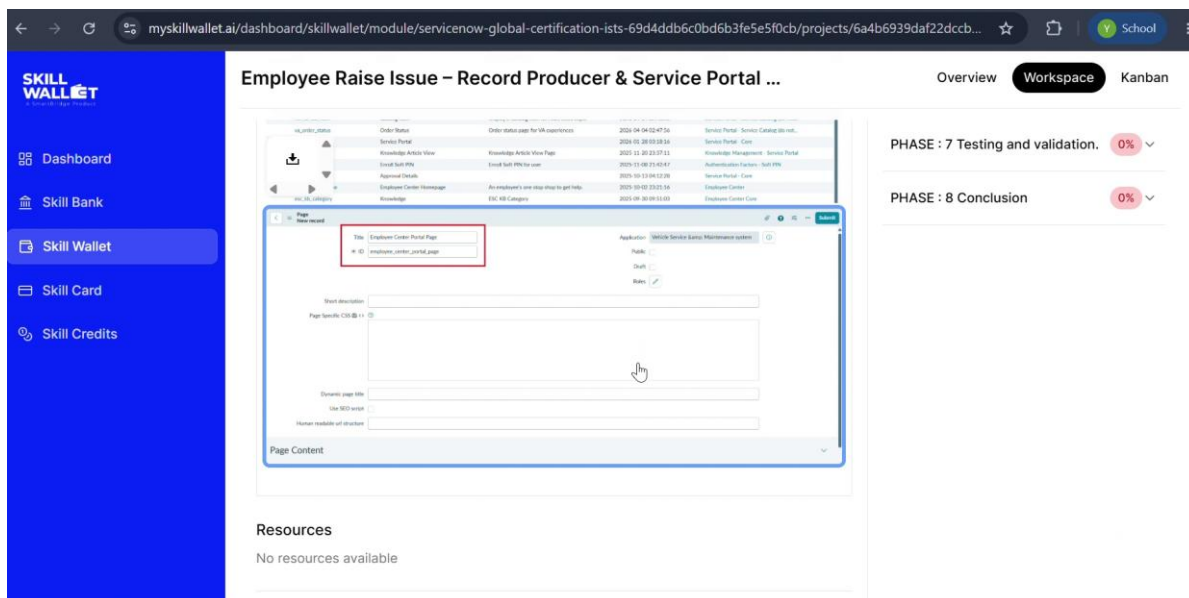

Figure 5: Example of the New Page form with Title and ID fields highlighted.

5.3 Save the Page

Click Save/Submit from the page form. After saving, confirm that the Employee Center Portal Page is present in the Pages list with the correct title and ID.

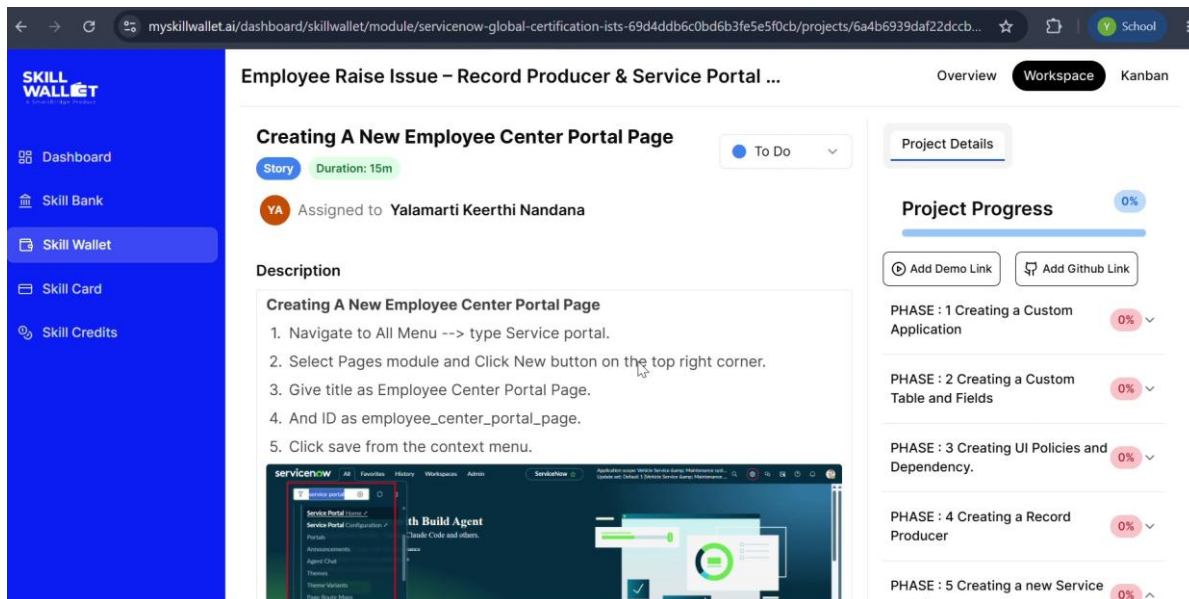

Figure 6: Phase 5 instructions for creating the Employee Center Portal Page.

6. End-to-End Workflow

1. Open ServiceNow Developer Instance.
2. Navigate to Service Portal configuration.
3. Create the Requesting portal.
4. Set the URL suffix to employee_request.
5. Configure homepage, knowledge homepage, login page, main menu, 404 page, and theme.
6. Save the portal and verify the configuration.
7. Navigate to Service Portal → Pages.
8. Click New.
9. Create Employee Center Portal Page.
10. Set ID to employee_center_portal_page.
11. Save the page and verify the record.

7. Expected Result

At the end of Phase 5, a new ServiceNow portal named “Requesting portal” should be configured with the required URL suffix and portal settings. A separate Employee Center Portal Page named “Employee Center Portal Page” with ID “employee_center_portal_page” should also be created and saved. These components provide the foundation for the widget and page customization activities in the next phase.

8. Technologies / Modules Used

- ServiceNow Developer Instance
- Service Portal
- Service Portal Configuration
- Service Portal → Pages
- Employee Center
- Catalog / portal navigation

9. Business Benefits

- Provides a dedicated employee-facing portal entry point.
- Improves access to employee service requests.
- Creates a structured page that can be extended with widgets.
- Separates portal configuration from backend application configuration.
- Provides a foundation for user-friendly service delivery.

11. Conclusion

Phase 5 establishes the user-facing portal structure for the Employee Raise Issue application. The configured portal and Employee Center page can be used as the base for adding widgets, arranging page content, and validating the complete employee request experience in subsequent phases.

Note: The screenshots in this document are taken from the provided Phase 5 project recording and are included as reference evidence for the documented steps.
