

PHASE 6

EMPLOYEE RAISE ISSUE

Record Producer & Service Portal

Creating Widgets and Adding to the Page

Project	Employee Raise Issue – Record Producer & Service Portal
Platform	ServiceNow
Phase	Phase 6 – Creating Widgets and Adding to the Page
Subtasks	Left Widget Creation; Right Widget Creation; Adding 2 Widgets to the Page

1. Phase 6 Overview

Phase 6 focuses on creating two Service Portal widgets and adding both widgets to the Service Portal page. The recorded project instructions divide this phase into three subtasks: Left Widget Creation, Right Widget Creation, and Adding 2 Widgets to the Page.

The widgets are configured through the ServiceNow Service Portal Widget Editor. The implementation uses HTML, CSS, and Client Script. The first widget is described as a commercial widget, while the second widget provides a Raise an Issue interaction connected to the record producer.

Employee Raise Issue – Record Producer & Service Portal ...

Left Widget Creation

Story Duration: 30m

YA Assigned to Yalamarti Keerthi Nandana

Description

- Navigate to Service portal Configuration Under Service portals.
- Click on the Widget Editor.
- Click Create a new widget
- Widget 1 Name : Commercial widget.
- Then Click Submit.
- Now we need to write code for HTML , CSS.
- Enable the Templates for each one.
- We can Enable Preview / hide using the Eye symbol.
- For this Widget we used Flouting the words and based on coarser moves.

Figure 1. Phase 6 – Creating Widgets and Adding to the Page (Skill Wallet task screen).

2. Left Widget Creation

The first subtask is Left Widget Creation. According to the project instructions, the widget is created from Service Portal Configuration under Service portals, using the Widget Editor.

2.1 Steps

- Navigate to Service Portal Configuration under Service portals.
- Open the Widget Editor.
- Create a new widget.
- Set the Widget 1 name as “Commercial widget”.
- Click Submit to create the widget.
- Write the required HTML and CSS code for the widget.
- Enable the templates for the relevant sections.
- Use the Eye symbol to enable or hide Preview when required.
- The instructions mention floating words and premium styling based on cursor movement for this widget.

The screenshot displays the Skill Wallet interface for creating a widget. The left sidebar contains navigation links: Dashboard, Skill Bank, Skill Wallet (selected), Skill Card, and Skill Credits. The main content area is titled 'Employee Raise Issue – Record Producer & Service Portal ...' and includes tabs for Overview, Workspace (selected), and Kanban. The 'Description' section lists the following steps:

- Navigate to Service portal Configuration Under Service portals.
- Click on the Widget Editor.
- Click Create a new widget
- Widget 1 Name : Link redirect.
- Then Click Submit.
- Now we need to write code for HTML , CSS and Client script.
- Here we also use the Client Script to Redirect the page by using sys_id of record producer.
- Enable the Templates for each one.
- We can Enable Preview / hide using the Eye symbol.
- For this Widget we used Flouting the words and Premium based on coarser moves.

The 'Resources' section indicates 'No resources available'. The 'Subtasks (3)' section lists:

- HTML Code (Easy)
- CSS Code (Easy)
- Client Script (Easy)

The right sidebar shows a list of phases with progress indicators (0%):

- PHASE : 1 Creating a Custom Application
- PHASE : 2 Creating a Custom Table and Fields
- PHASE : 3 Creating UI Policies and Dependency.
- PHASE : 4 Creating a Record Producer
- PHASE : 5 Creating a new Service portal
- PHASE 6: Creating Widgets and Adding to the Page
 - Left Widget Creation
 - Right Widget Creation
 - Adding 2 Widgets to the Page
- PHASE : 7 Testing and validation.
- PHASE : 8 Conclusion

2.2 HTML Code

The recorded instructions show the commercial widget HTML with a heading, a short description, and a list of service features. The displayed content includes end-to-end IT services, support, issue resolution, 24/7 customer support, faster issue resolution, transparent tracking, and secure & reliable service.

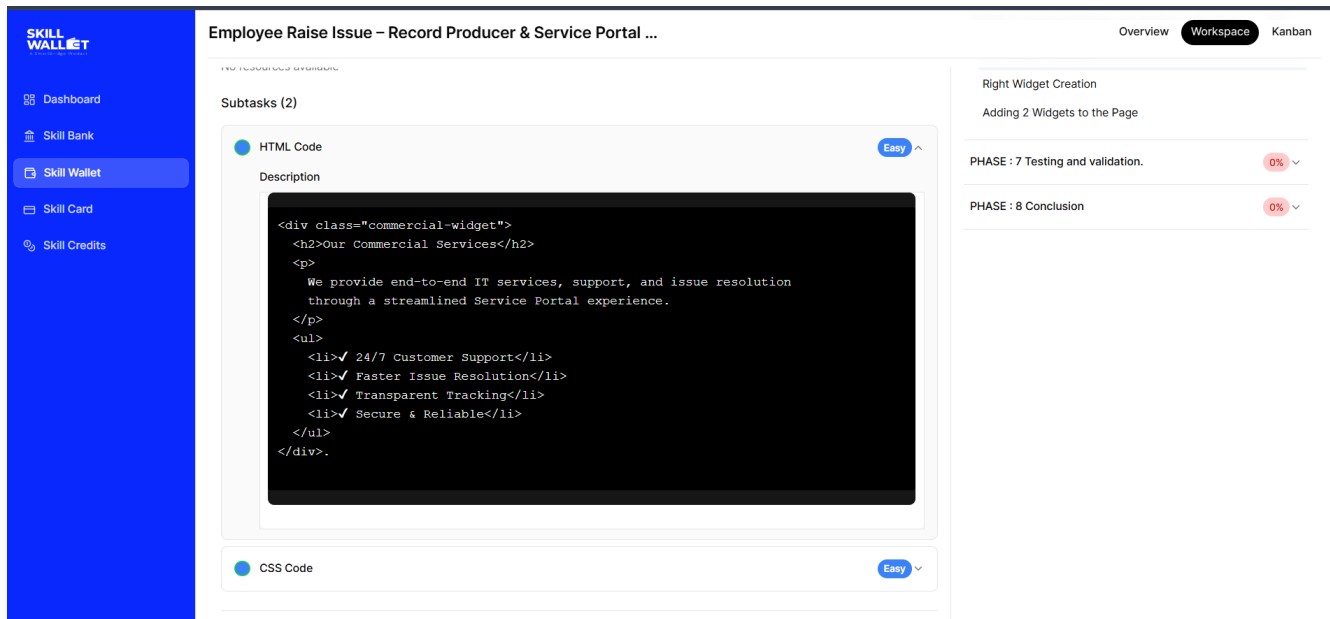

Figure 3. Commercial widget HTML code shown in the Phase 6 instructions.

3. Right Widget Creation

The second subtask creates the Raise an Issue widget. The recorded material shows that this widget uses an HTML anchor with a click action that calls the record producer function. It displays an overlay containing the text “Raise an Issue” and “Submit your request or complaint”, together with a “Raise Ticket →” action.

3.1 Widget Configuration

- Create the second widget in the Widget Editor.
- Configure the HTML content for the Raise an Issue interaction.
- Use the record producer action through the widget click function.
- Configure the widget overlay and button text.
- Enable the required templates and Preview option where applicable.
- Configure CSS to style the overlay, text, buttons, and visual effects.
- Use the Client Script where required for the record producer interaction and redirection behavior.

3.2 Raise an Issue Widget HTML

The displayed HTML uses an anchor element with a JavaScript void link and an ng-click action. The click action calls `c.openRecordProducer()`. Inside the widget, the overlay contains the heading “Raise an Issue”, supporting text, and a “Raise Ticket →” button.

Figure 5. Raise an Issue widget HTML code showing `c.openRecordProducer()` and the overlay content.

3.3 CSS Styling

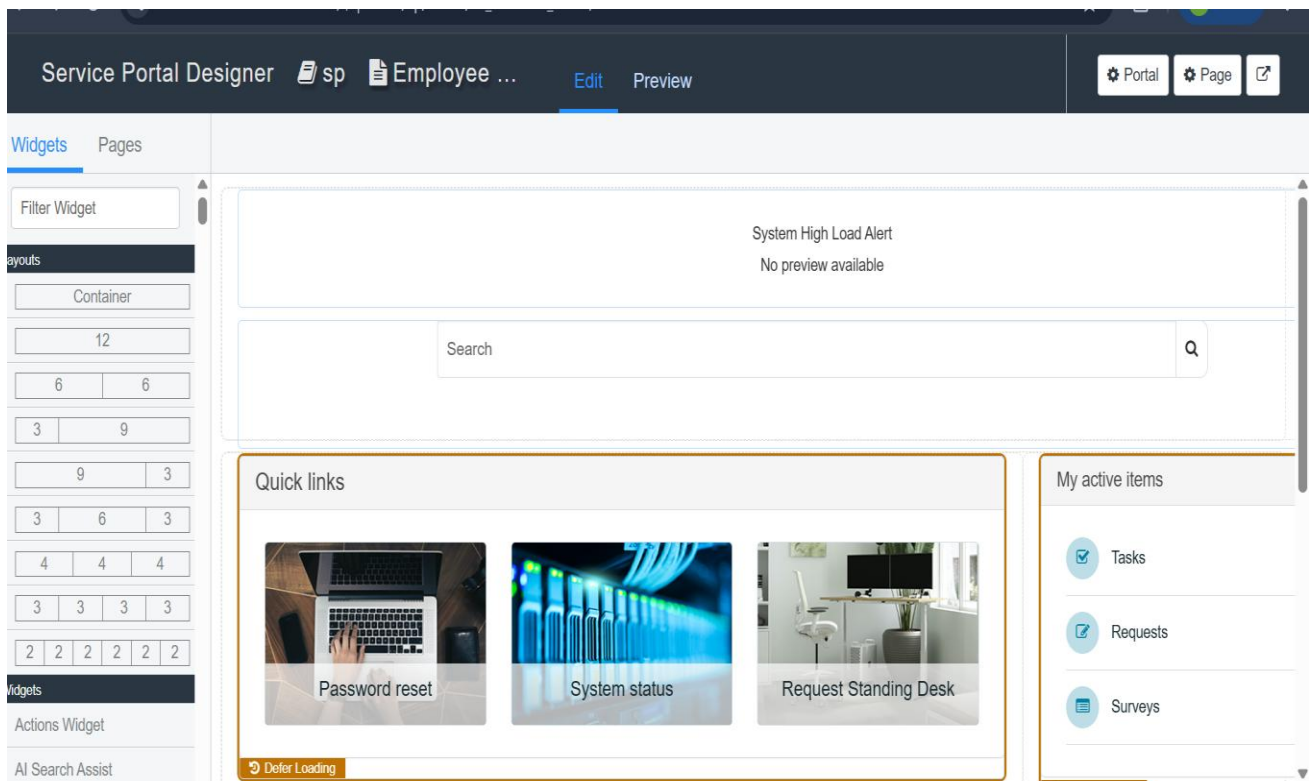

The recorded material also shows CSS for the widget overlay. The styling uses a gradient background, full height and width, white text, centered flex layout, and a background transition. Additional text and button styles are configured below the overlay section.

4. Adding 2 Widgets to the Page

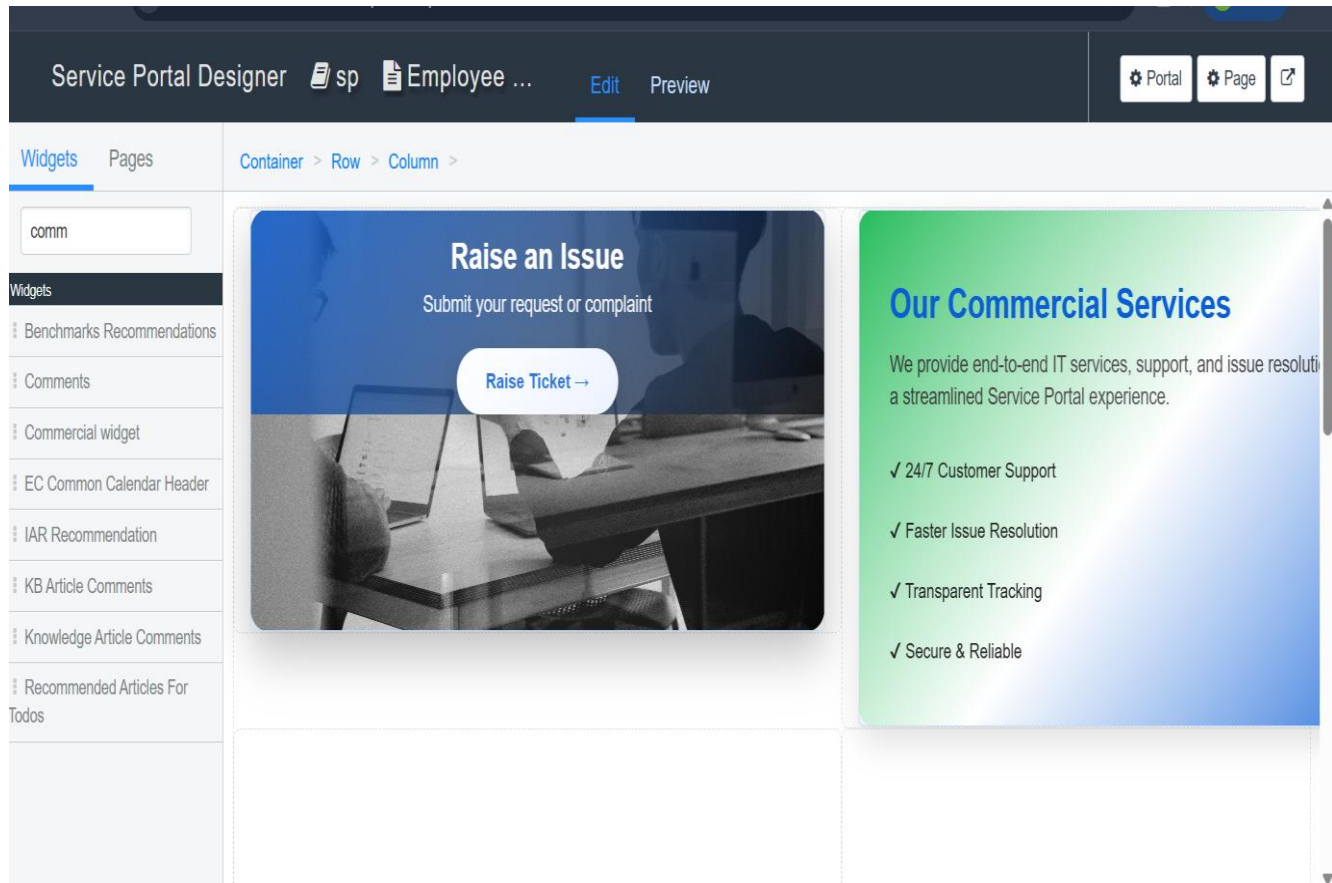

After creating the two widgets, the final subtask is to add both widgets to the Service Portal page. The recorded project screen identifies this as “Adding 2 Widgets to the Page”. The final recorded screen shows the ServiceNow Service Portal area and the portal configuration/designer interface used for page editing.

4.1 Steps

- Open the Service Portal configuration/designer environment.
- Select the required portal page for the Employee Raise Issue solution.
- Use the page editor/designer to add the created widgets.
- Add the first commercial widget to the page.
- Add the second Raise an Issue widget to the page.
- Arrange the widgets in the required page locations.
- Preview the page and confirm that both widgets are displayed.

5. Result of Phase 6

Phase 6 completes the widget layer of the Employee Raise Issue Service Portal solution. Two widgets are created and prepared with HTML, CSS, and Client Script as required. The widgets are then added to the Service Portal page. The Raise an Issue widget provides the user-facing entry point for submitting an issue through the record producer.

- Commercial widget created and configured.
- Raise an Issue widget created and configured.
- HTML and CSS content added for the widgets.
- Client-side interaction is configured for the Raise an Issue action.
- Both widgets are added to the Service Portal page.
- The portal page can be previewed to verify the widget placement and appearance.
