

PHASE 7

TESTING AND VALIDATION

Employee Raise Issue – Record Producer & Service Portal

7.1 Objective

The objective of this phase is to test and validate the Employee Raise Issue Record Producer and Service Portal implementation. The testing verifies that the configured Service Portal page, image and icon, created widgets, Record Producer, form fields, UI Policies, and dictionary overrides work as expected.

7.2 Testing Navigation

The application is tested by opening the configured Service Portal URL in a new browser tab and navigating through the Employee Raise Issue page.

1. Open a new browser tab.
2. Paste the configured Service Portal URL into the browser address bar.
3. Press Enter to open the Service Portal page.
4. Observe the image and icon picture added to the page.
5. Scroll down the page to view the created widgets.
6. Move the cursor through the page and observe the floating behaviour of the two widgets.

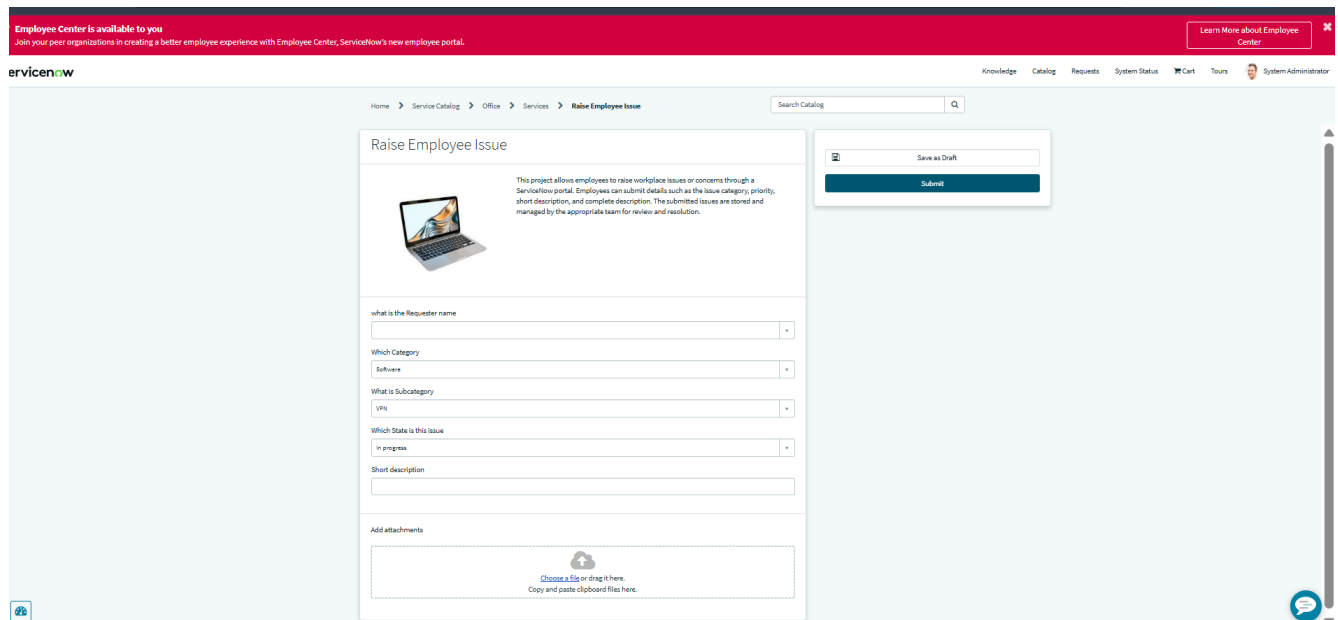

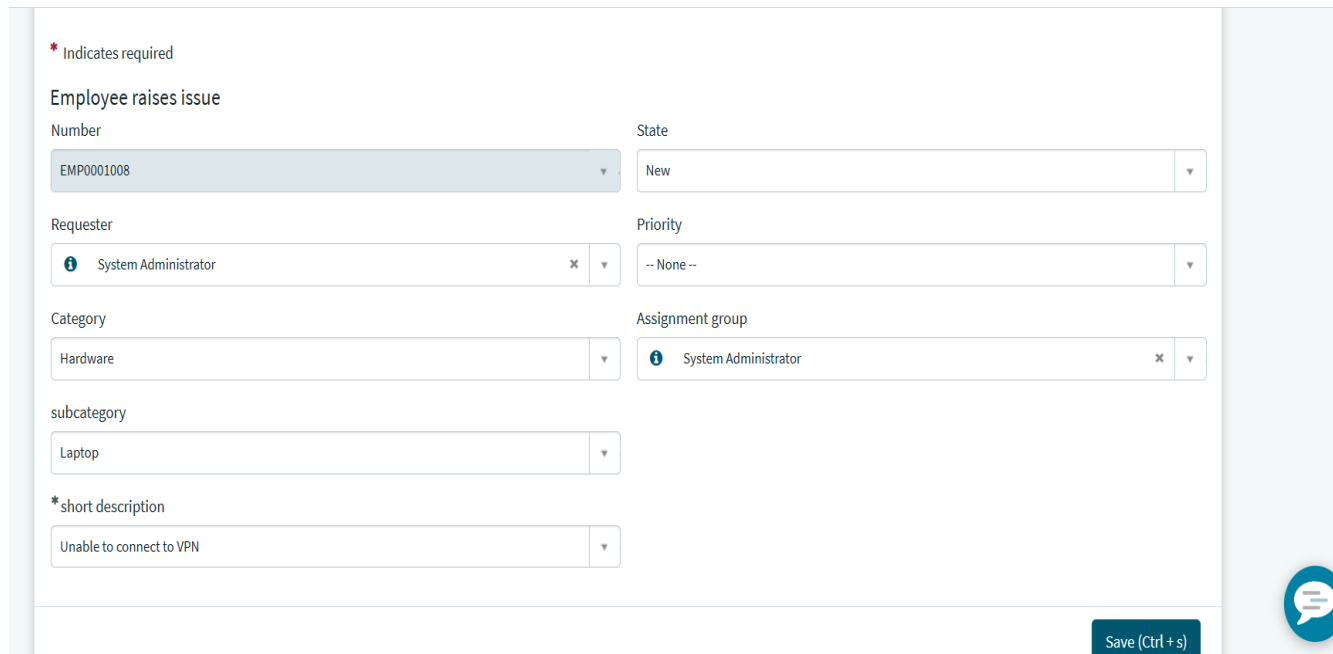

Figure 1. Service Portal page showing the configured image, icon, and created widgets.

7.3 Testing the Raise Ticket Widget

The Raise Ticket widget is tested to verify that the configured link/button responds correctly and opens the Employee Raise Issue Record Producer.

7. Locate the Raise Ticket widget on the Service Portal page.
8. Click the Link/Raise Ticket button.
9. Verify that the Raise Ticket action is triggered.
10. Confirm that the Record Producer opens for entering employee and issue details.

The screenshot shows a web form titled "Employee raises issue". At the top left, there is a red asterisk icon followed by the text "* Indicates required". The form contains several fields:

- Number:** A dropdown menu with the value "EMP0001008".
- State:** A dropdown menu with the value "New".
- Requester:** A dropdown menu with the value "System Administrator" and a small "x" icon to the right.
- Priority:** A dropdown menu with the value "-- None --".
- Category:** A dropdown menu with the value "Hardware".
- Assignment group:** A dropdown menu with the value "System Administrator" and a small "x" icon to the right.
- subcategory:** A dropdown menu with the value "Laptop".
- *short description:** A text input field with the value "Unable to connect to VPN".

At the bottom right of the form, there is a blue button labeled "Save (Ctrl + s)". On the far right edge of the screenshot, there is a blue circular chat icon with a white speech bubble.

Figure 2. Raise Ticket widget and the resulting Record Producer navigation.

7.4 Testing the Record Producer

After selecting the Raise Ticket option, the Record Producer is opened. The form is checked to ensure that employee information and issue details can be entered and that the configured fields are displayed.

11. Verify that the Employee Raise Issue form is displayed.
12. Check the requester field.
13. Check the category and subcategory fields.
14. Check the priority and assignment group fields.
15. Enter the required employee and issue information.
16. Click the Submit button to submit the request.

EMP0001009

* Indicates required

Employee raises issue

Number: EMP0001009

State: New

Requester: System Administrator

Priority: Medium

Category: Network

Assignment group: System Administrator

subcategory: VPN

* short description: "Unable to connect to VPN"

Save (Ctrl + s)

7.5 Testing UI Policies and Dictionary Override

The final part of testing is to observe the changes in fields and restrictions configured using UI Policies and dictionary overrides. The form behaviour is checked while entering and submitting the issue information.

17. Observe the fields displayed on the Record Producer.
18. Verify the field changes controlled by the configured UI Policies.
19. Check that the configured field restrictions are applied.
20. Verify the behaviour configured through dictionary overrides.
21. Confirm that the form accepts the required information and can be submitted.

```
javascript:void(0)
```

Testing and validation confirm the behaviour of the Employee Raise Issue Record Producer and Service Portal implementation. The Service Portal navigation, image and icon, created widgets, Raise Ticket action, Record

Producer, form fields, UI Policies, and dictionary overrides are checked during this phase. Successful validation indicates that the implemented components are working together as configured and the project can proceed to the final conclusion phase.
